So one thing we can do is make one graph for each of the 4 ranks. In that case, we get this:

Pre-processing the data

Ok, there's a bit more hope here. It seems like the better grades and test scores the student has, the more likely they are to be accepted. And the rank has something to do with it. So what we'll do is, we'll one-hot encode the rank, and our 6 input variables will be:

- Test (GPA)
- Grades (GRE)
- Rank 1
- Rank 2
- Rank 3
